(54) SPRINKLER FOR GARDEN AND GARDENING

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a water sprinkler capable of simply and surely sprinkling water over a wide range by using a commercially available water sprinkling hose.

SOLUTION: This sprinkler for a garden and gardening is obtained by boring a hole in an optional position of the commercially available water sprinkling hose 3 and attaching a fitting 2 for water diversion and water sprinkling and an adapter 9 suited to the size of the hose 3 in the gardening water sprinkler. When the fitting is rotated in the circumferential direction, the amount of water sprinkled can be regulated and the water stop in the place can be carried out by further rotating the fitting.

The fitting itself is simple in structure and the manufacturing cost is reduced. Any layout can be provided according to the scale of the water sprinkling site. When a full-automatic water sprinkler 30 is connected to the apparatus, the water sprinkler 30 is operated so as to keep the humidity of soil to be detected with a sensor constant by simple setting and a permanently stationed operator is not required.
